

BE A BETTER TRIAL LAWYER

We are the resource to help you in your mission to do what truly matters...fight and win for your clients.

The Biomechanics of a Traumatic Brain Injury Claim

In the absence of skull fractures, the brain can still be injured. While traumatic brain injuries range from mild to severe, both the age and physical condition of the individual can greatly impact the short term and long-term damages stemming from the original injury. In an adult, traumatic injury to the brain can result in diminished or loss of cognitive and or executive functions. In a young child, research has shown that damage to the brain may not result in the reduction or loss of functions they currently have, but rather a loss of the ability to develop the part of the brain that is injured...[read more](#).

Use Role Reversal to Get Unstuck in the Drama

Role reversal is a technique used by Louise Lipman through out her trial consulting and as a faculty member at Gerry Spence's Trial Lawyers College. She has found that the process results in many benefits to all participants, including allowing one to better understand the people and the situation, shifting the perspective of the lawyers, clients and witnesses, and getting everyone unstuck... [read more](#)

Working With The Monologue

I believe the strongest connection between a great trial lawyer and a great actor boils down to one key word: *responsibility*. Both "roles" carry an enormous responsibility to tell the whole truth of the person they are representing, on stage or in the courtroom. And that responsibility requires one hundred percent commitment to deliver the story, in the most authentic way possible, to the audience... [read more](#)
